

Text Expander PhraseExpress with Privacy-Friendly AI

Text Snippet Software "PhraseExpress" in New Versions for Windows and macOS

Trier, 08/19/2024 – Bartels Media GmbH releases the new version 17 of the popular text expander software "PhraseExpress" for Windows and version 6 for macOS.

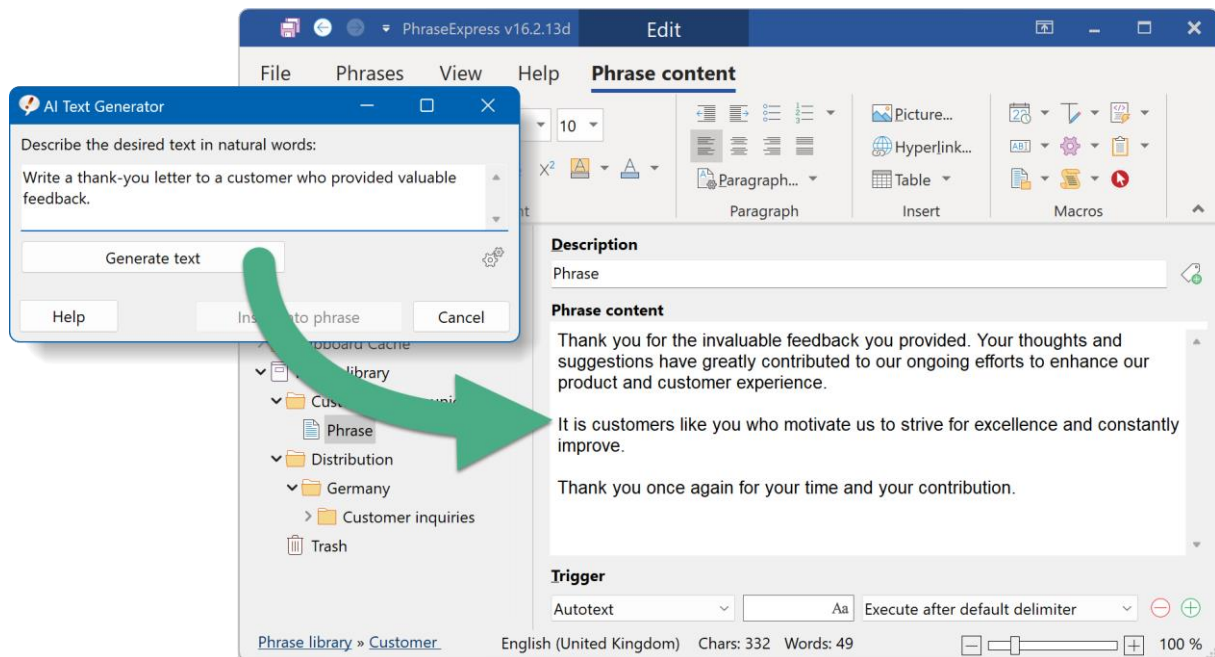

What's new:

- Integration of the locally installed AI engine "Ollama" with GPU support.
- ChatGPT 4-Turbo and ChatGPT 4-omni has been added to the OpenAI support.
- Phrase output can now be set to specific programs, clipboard, file, or email.
- Snippet access rights optionally with Microsoft Azure Entra (formerly "ActiveDirectory").
- Automatic update distribution of Windows clients when used with a SQL server.
- Migration assistant for quick transfer to a new computer.

The productivity solution "PhraseExpress" manages frequently needed phrases, inserts them system-wide into any application, and thus facilitates daily writing tasks on Windows PCs, Macs, and iPhone/iPad.

Process Texts with Artificial Intelligence

PhraseExpress integrates AI functions for creating new text blocks based on natural language descriptions ("Prompt"), for example, "Write a thank you for useful customer feedback in English":

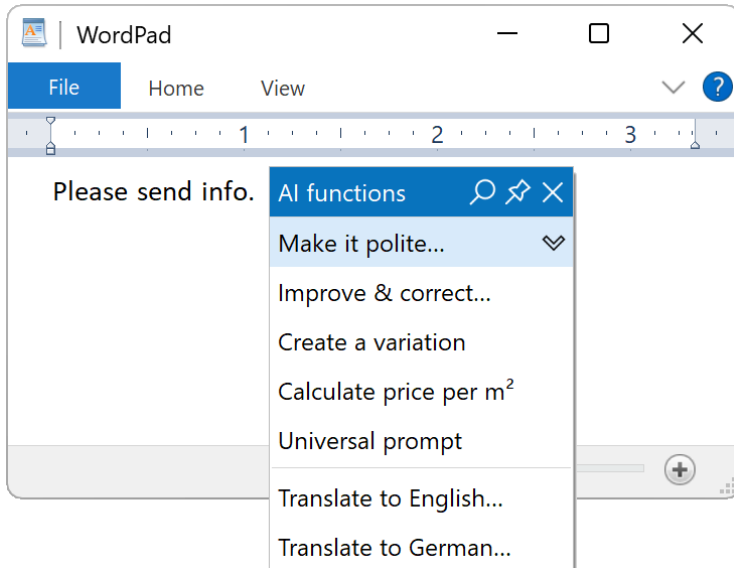

Advantage: PhraseExpress saves AI-generated text in the local database for infinite reuse, eliminating the need for repeated AI processing, delays, internet transmission, or fees when reusing the phrase.

This makes PhraseExpress and AI a perfect symbiosis, saving time and money.

Use AI in Any Application

PhraseExpress connects AI with the desktop and provides AI functions in *any* application.

When the user types text in any application, PhraseExpress offers various AI functions at the touch of a button that apply to the text just written:

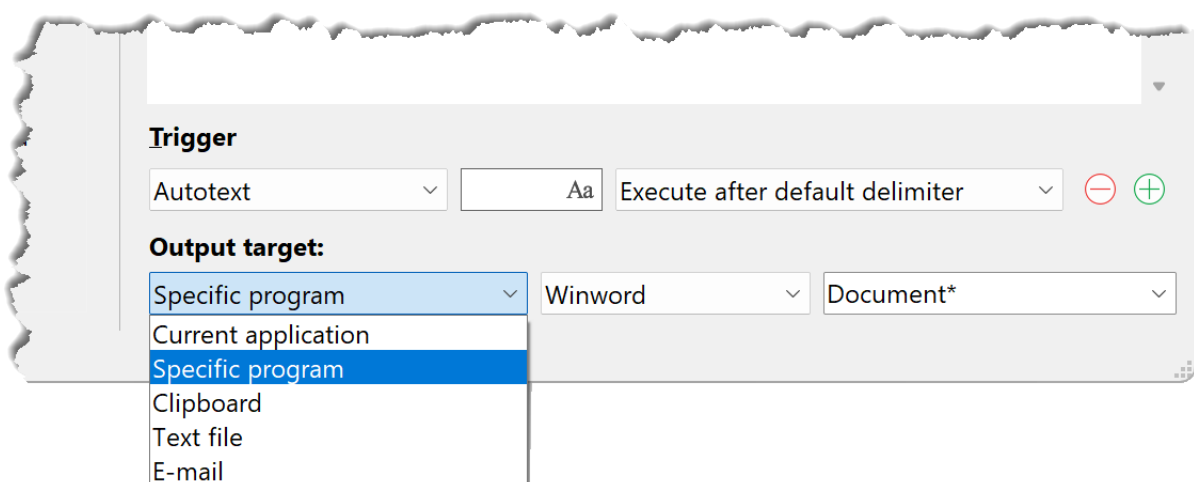

New is the support for the locally installed and operated AI engine "Ollama" with the popular language model "Llama 3" including GPU support. Alternatively, "GPT4All" is also offered.

No texts are transmitted to online services; AI processing takes place privacy-friendly on the local computer.

Text Output to Specific Programs, Clipboard, Email, or File

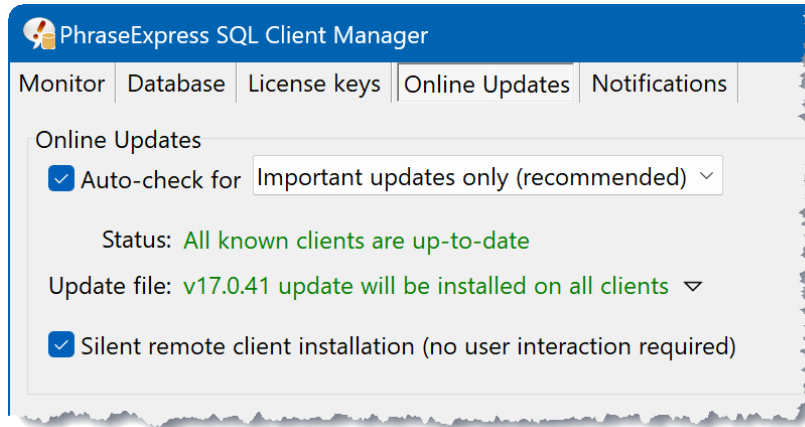

The output destination of a text block can now be set to a specific application or the clipboard. Alternatively, PhraseExpress can send the text block directly by email with attachments or write it to a text file:

News for Corporate Users

PhraseExpress now supports user identification using cloud-based Microsoft Azure Entra (formerly "ActiveDirectory") for text block access restrictions.

Software updates are now centrally rolled out to all Windows clients and, if desired, automatically installed in the background:

Easy Transfer to a New Computer

PhraseExpress now creates a complete backup of all associated files at the touch of a button for data backup and quick transfer to a new computer.

Freeware for Private Users

The latest version of PhraseExpress is also available as freeware variation for private users and can be downloaded for free at <https://www.phraseexpress.com/de/>.

Commercial users can get PhraseExpress for US\$ 89.95 in the "Standard Edition", US\$ 149.95 in the "Pro Edition", and US\$ 249.95 in the comprehensive "Enterprise Edition".
